I am a concerned citizen as well as a member of the Center for Science in the Public Interest. I urge you to help improve the health of all of our citizens, especially vulnerable children, by banning the use of antibiotics and hormones in animal feed. The use of these in feed can make bacteria resistant to those antibiotics, and can leave our nurse practitioners and doctors with no way to treat life threatening bacterial infection in humans. I have been driving across town weekly, buying milk, eggs, and meat which come from animals which are not fed feed treated with hormones and antibiotics. My health has improved markedly and my son with ADD has also improved his behavior and attention span. That is why I support the petition filed by CSPI
Sincerely,
Maggie Olson, RN/PHN MSN
